

Osteo-Form®

High potency calcium-phosphorus and multi-vitamin nutritional supplement.

Advantages

- Bio-available Formulation for Maximum Absorption
- Ideal for Bone Development and Fracture Repair
- Economical, Powdered Formulation and Chewable Tablets for Dogs

LLOYD, Inc's optimally bioavailable calcium:phosphorus (1.8:1) formulation includes the key vitamin components critical to cartilage metabolism, healthy bone growth and effective fracture healing. Osteo-Form is also an ideal supplement for pregnant and lactating bitches and mares.

Available as chewable tablets, or powder, every dose is backed by the quality and economic value you have come to expect from LLOYD.

Osteo-Form

Optimal Nutrition for Strong Bones

Approximately 99% of calcium and 80% of phosphorus are found in the skeleton and teeth and as such are vital components of developing and maintaining a strong and healthy skeletal system. Vitamin D also plays an integral role in calcium and phosphorus absorption and bone mineralization. In growing animals deficiencies of calcium, phosphorus and/or Vitamin D most frequently results in rickets. Bone demineralization also occurs in adults when these nutrients are insufficient.

FOR HORSES

Although the specific mineral requirements vary with age and activity level, late-term pregnancy, lactating broodmares as well as growing horses, typically need supplemental calcium and phosphorus.¹ Because developmental orthopedic diseases (DOD) are a significant concern in young horses, feeding and nutrition should be optimized to support healthy development.² Both the level and balance of calcium and phosphorus are of particular importance in proper bone growth and development. Osteo-Form consistently delivers the proper ratio (1.8:1) for best outcomes.

FOR DOGS

Developmental orthopedic disorders are also common in large breed dogs with rapid growth rates. DOD is a group of diseases that result in skeletal abnormalities including hip dysplasia, craniomandibular osteopathy, fragmented coronoid process and related conditions. The etiology of these conditions is considered to be multifactorial, attributable to genetic and environmental factors. Osteo-Form's optimal ratio of calcium and phosphorus serves as a balanced nutritional approach toward healthy bone development and repair.

LLOYD, Inc's highly palatable Osteo-Form provides the right pharmaceutical grade minerals and vitamins, in the proper balance, for consistently reliable bone nutrition.

INGREDIENTS:

Dicalcium phosphate, calcium carbonate, torula dried yeast, extracted glandular meal, bone ash, lactose, starch propylene glycol, animal liver meal, bone meal steamed, magnesium stearate, ascorbic acid, vitamin A palmitate, ethoxyquin, cholecalciferol, BHT.

GUARANTEED ANALYSIS

| Ingredient | Equine per? | Canine per Tablet ½ tsp powder) |
|------------|-------------|---------------------------------|
| Calcium | | 600 mg |
| Phosphorus | | 335 mg |
| Vitamin A | | 750 IU |
| Vitamin D3 | | 75 IU |

KEEP OUT OF REACH OF CHILDREN

KEEP IN A COOL, DRY PLACE

SUPPLEMENTATION RECOMMENDATIONS:

HORSES

Broodmares

Foals

1-3 slightly rounded teaspoons per day.

Yearlings

3-5 slightly rounded teaspoons per day.

DOGS

Chewable Tablets

1-2 Tablets per 5 kg (11 lbs) per day

SA Powder

½ - 1 slightly rounded teaspoon per 5 kg (11 lbs) per day
