

# Methio-Form<sup>®</sup>

**Three reasons why Methio-Form works better than acidified diets.**

**Methio-Form counters the "FAT CAT" problem.**

**Some cats won't eat an acidified diet.**

**Methio-Form keeps you in prescription control.**

When you prescribe Methio-Form as an acidifying agent, you are free to control dietary caloric intake. This avoids the problems with obesity often seen with some acidifying diets. Methio-Form costs just pennies a day to use. That makes it an attractive alternative to your cost-conscious clients.

Note: Urinary pH should be monitored, especially if used with acidifying diets.

Many cats won't eat acidifying diets or will eat unpredictably. With Methio-Form as your treatment option, you avoid all the problems that can arise when you try to switch a cat's diet. Tasty Methio-Form Chewables are your best assurance that they'll receive the required dose of DL-Methionine to attain the optimum urinary pH.

When you prescribe Methio-Form in the 50-tablet size bottle, you'll see the patient regularly to assure that therapeutic doses are maintained.

With decades of proven efficacy, Methio-Form offers predictable, long-term safety for continuous use. For information or to order, contact your Vet-A-Mix distributor today.

## Advantages

- Palatable fish flavor base
- Proven effectiveness – one 500 mg Methio-Form tablet per day will double the hydrogen ion concentration (acidity) of male feline urine
- Scored tablets permit easy, accurate administration
- Helps control urine odor in male cats

## Chewable Tablets

**The original chewable form of DL-Methionine for acidifying the urine of cats and dogs.**

**Indications:** For use as an aid in acidifying the urine of cats and dogs.

**Dosage and Administration:** Daily dosages vary with diets and amount of acidification needed. After dosages have been determined, they may be used continuously.

**Cats:** The usual daily dose is 2.5 to 5.0 mEq/kg body weight or 1/2 to 1 tablet per 1 to 1.5 kg (2.5 to 3 lb) body weight. Average size adult cats normally should receive 1 1/2 to 3 tablets (10 to 20 mEq) daily.

**Dogs:** The usual daily dose is 2 to 4 mEq/kg body weight. Small breeds - 7 kg (15 lb) or under, 1/2 to 4 tablets daily. Medium breeds - 7 to 15 kg (15-33 lb), 2 to 7 tablets daily. Large breeds - 15 to 30 kg (33-66 lb), 4 to 13 tablets daily.

**Caution:** In rare cases animals may experience gastrointestinal disturbance. In those cases, administer during feeding or in two to three divided doses.

**Caution:** Federal law restricts this drug to use by or on the order of a licensed veterinarian.

0703

**Each scored Methio-Form tablet contains:**

DL-Methionine . . . . . 500 mg (6.7 mEq)  
In a palatable protein base.

**Warning:** Over-consumption may result if access to open bottles occurs. The effect may be severe and could result in life-threatening metabolic acidosis if veterinary treatment is not initiated.

**Contraindications:** Do not administer to animals with severe liver, kidney or pancreatic disease, or which are acidotic.

**Important:** For additional indications and information, consult package insert.

Store at room temperature and protect from light. Avoid excessive heat (104° F).

Patent Pending

**KEEP OUT OF REACH OF CHILDREN**

**How Supplied:**

Bottles of 50, 150 and 500 tablets
