How Supplied:

5-pound bag List No. 0541
20-pound pail List No. 0542

Purpose:

For use as a feed supplement for horses.

Feeding Directions:

The usual amount is:

- **1,100-pound (500-kg) horse:**
Two heaping measures per day.
- **Ponies:**
One heaping measure per day.

One heaping measure of Biotin-100 weighs approximately 34 grams and provides 7.5 milligrams Biotin.

Preparation:

Biotin-100 can be administered by mixing the daily amount in the concentrate or by top-dressing on grain, preferably rolled or ground. To facilitate proper adhesion of Biotin-100 to the ration, slightly moisten the grain with water or liquid supplement.

Guaranteed Analysis:

Each pound contains:
Biotin 100 mg

Ingredients:

Biotin, rice hulls, calcium carbonate, and mineral oil.

Importance of biotin

Biotin-100 aids in repair and conditioning of the defective equine hoof.

The hoof wall is constantly growing. Biotin-100 works by strengthening and hardening the hoof wall as it is forming. It takes 6 to 9 months for the hoof to completely replace itself. The result of biotin supplementation is stronger and harder hooves that are easier to maintain and less difficult to shoe.

1/3 Cup measure enclosed in each package.
